

Hi,

Thank you for participating in this coding exercise. You should find the following items in this folder:

- test_creative.psd
- readme.pdf
- email.html
- /img

Once you've located there files/folders, please follow these steps:

1. Code an HTML email using the test_creative.psd and the link info below as a guide
2. Save HTML code in the email.html file
3. Save any image assets in the /img folder
4. Rename the parent folder with your name replacing "yourNameHere"
5. Zip the parent folder and return as an email attachment

While coding please adhere to all email best practices, including:

- Code email to render consistently across all major email platforms (Gmail, Outlook desktop, iOS, etc.)
- Code all text as HTML text, not embedded within an image
- Email should visually match PSD as closely as possible (fonts, colors, dimensions, etc.)
